

$$\Delta t = -27.80$$

$$[-31.61, 24.71]$$

A histogram showing the distribution of  $\Delta t$ . The data is represented by teal bars, with a high concentration of values near -30 and a smaller, broader distribution around 15. A smooth gray curve represents a Gaussian fit to the data. The x-axis has tick marks at 0 and 50.

$$\tau = 0.29$$

$$[0.15, 1.56]$$

A histogram showing the distribution of  $\tau$ . The data is represented by teal bars, with a very sharp peak near 0. A smooth gray curve represents a Gaussian fit to the data. The x-axis has tick marks at 0 and 10.

$$\Delta p = 0.23$$

$$[0.05, 0.37]$$

A histogram showing the distribution of  $\Delta p$ . The data is represented by teal bars, with a peak around 0.2. A smooth gray curve represents a Gaussian fit to the data. The x-axis has tick marks at 0.0 and 0.5.
